

Safeguard Self-Service Systems and Control User Actions

Zero Trust based, purpose-built product to secure ATMs

These self-service devices have a unique threat model and require continuous protection. Over-permissive services or users, or security loopholes in the standard Windows® processes can potentially create a security exposure, disruption of service, or adversely impact an organization's reputation. Vynamic Security Access Protection reduces the attack surface and contextualize security within Windows operating system for self-service environments.

To prevent tampering, data misuse unauthorized access, and ensure that Windows-based devices run smoothly, it is critical that financial institutions and retail organizations set up appropriate access mechanisms and safeguards. The access mechanisms inherent in the Windows operating system need to be extended through tailored user and rights management policies. Vynamic Security Access Protection meets these requirements and offers a higher level of security while ensuring fast access via a convenient user interface.

STRENGTHENS OPERATING SYSTEM AND PLATFORM

Extends the standard security services provided by Microsoft Operating systems with purposely build and industry specific hardening, strengthening otherwise security weak configuration:

- Dramatic reduction of inherent attack surface and exposure to potential risk by hardening operating system
- Closes all security loopholes in the standard Windows access mechanism
- Provides unique keyboard shortcuts blocking and mouse-blocking capabilities
- Offers the ability to harden browsers such as Internet Explorer and Google Chrome

ALLOWS CONTROLLED ACCESS FOR TECHNICIANS

Controlled, onsite access with an innovative password-less authentication:

- Completely eliminates the need to share any Windows user account or administrator password with a technician or operational user
- Offers secure, controlled access for operational use cases
- Provides instant privileges to technicians with a unique mobile app or with a quick call to the help desk

DEFINE DIFFERENT ROLES FOR VARIOUS USERS

Provides a personal security policy for each authorized user so that functions, programs and resources can only be used within the predefined framework:

- Establishes who has accessed what, when and with which authorization
- Configures system logging so that all activities by users and system administrators can be recorded
- Creates a thorough record of user behavior by logging every access attempt and incorrect behavior

Secure Against Internal & External Threats

MULTI-LAYERED APPROACH

Vynamic Security provides a tightly integrated multi-layer approach in order to protect self-service terminals, POS devices, operating systems, and customer data against historical and newly-evolving attack vectors. This model ensures that if one security layer fails, others will take over to shield and secure an organization's critical assets. The Vynamic Security Software Suite consists of Intrusion Protection, Access Protection, and Hard Disk Encryption.

FEATURES

- Central Administration Console for the management of all security settings / parameters / configurations
- Prefabricated configuration incorporating industry OS hardening best practice for DN and multi-vendor systems, including POS devices
- Industry-leading operational tools such as Ticketing using mobile app and Helpdesk tools
- Fast installation and easy administration
- Low maintenance and total cost of ownership (TCO)
- Complies with PCI DSS
- Supports Windows 7 and Windows 10 (including Windows 2021 LTSC)
- Multi-language support

BENEFITS

- Effectively protects against unauthorized access to devices running on Microsoft Windows
- Centralized security policy management for the entire self-service fleet with support for multi-vendor software and hardware
- Eliminates the need to share administrator or user account passwords with the fleet
- Provides protection of user and group configurations through system configuration masking
- Standardizes the logon mechanism thanks to storage of encrypted passwords
- Securely logs system and user activities for auditing purposes

CONNECTIVITY

- Can be integrated seamlessly into existing IT environments, without affecting other applications
- Can be configured and managed from the Vynamic Security server
- Provides integration with availability management software like Diebold Nixdorf's Vynamic View

DIEBOLD NIXDORF VYNAMIC SOFTWARE

Vynamic is a powerful software portfolio that enables financial institutions to eliminate friction to transform the user experience and the operation. Flexible and adaptable, Vynamic is built to align with how financial institutions operate and is bundled to support the modern banking environment including channels, payments, engagement and operations.

ADDITIONAL SOLUTIONS UNDER THE VYNAMIC SECURITY SUITE

- Vynamic Security Hard Disk Encryption protects against offline threats and protects data so it cannot be tampered or stolen
- Vynamic Security Intrusion Protection enforces Least Privilege and protects against zero-day threats as well as provides protection from USB-based attacks
