

Near Real-Time, Intelligent Reporting of Self-Service Inventory without a Site Visit.

Today it costs more than ever to keep pace with needed technology updates. In this environment, the advantage of centralized terminal inventory reporting is clear.

Dynamic View Inventory Manager delivers a centralized, comprehensive 360° view of terminal configuration and capabilities for any Microsoft® Windows®-based device. This unprecedented level of detailed information on software, hardware and peripherals is critical to managing a self-service fleet. It enables better fleet investment decisions, more thorough audits of field engineer's reports, confirmation of compliance requirements, and optimal management of maintenance and upgrades.

INCREASE EFFICIENCIES WITH A CENTRALIZED SOLUTION

Easy-to-use solution delivering 100% accurate and comprehensive insights on all fleet assets irrelevant of vendor — hardware, software, peripherals, operating system (OS):

- Detailed reporting allows visibility into low level hardware, software and firmware versions
- Eliminate errors and data tampering while reducing efforts
- Provide details on compliance, maintenance and customer usage

GATHER MORE INTUITIVE, INTELLIGENT MANAGEMENT

With the ability to connect an entire self-service network, it's simple to track, search and maintain accurate records for all terminals and devices:

- Ensure configuration consistency across the entire self-service network
- Plan change-management projects and manage fleet distribution
- Improve adherence to compliance with encrypting PIN pad (EPP) lifecycle and historical change tracking

OPTIMIZE MAINTENANCE AND REDUCE COSTS

With Dynamic View Inventory Manager, you can track, target and plan updates for out-of-sync terminals:

- Plan channel maintenance and upgrades strategically, specifically for future investments (i.e. Windows 10, new peripheral versions)
- Prioritize critical inventory updates while purposefully scheduling non-essential maintenance
- Provide terminal/asset information to field engineers prior to visits, optimizing downtime and number of visits

Vynamic™ View Inventory Manager

FEATURES

1. Automatically detect and report any inventory change
2. User-definable inventory view for partial or entire network
3. Central Record System collects more than 150 data points, including:

Terminal Information

- Vendor
- Model
- Serial Number

Device Details (for each device)

- Name
- Description
- Model
- Serial Number
- Firmware version

PC Details

- Processor
- Hard Drive
- Memory
- BIOS

Software

- Terminal application detailed information
- Windows Programs
- Windows Updates

BENEFITS

- Multi-vendor Solution: Works with any Microsoft Windows-based device
- Cross Platform: Can be added in conjunction with existing VCP 6, VCP-Pro (Vista), VCP-Pro (ProFlex4), VCP-Lite (ProCash) terminal software as well as competitor software
- No Network Dependency: Does not require certification
- Phased Implementation: Can be used individually or with other Vynamic View Managers

DIEBOLD NIXDORF VYNAMIC SOFTWARE

DN Vynamic is a powerful software portfolio that enables financial institutions to eliminate friction to transform the user experience and the operation. Flexible and adaptable, DN Vynamic is built to align with how financial institutions operate and are bundled to support the modern banking environment including channels, payments, engagement and operations.
